Contents

List of Appendices	xi
List of Figures	xii
List of Tables	xvii
Acknowledgements	xix
Preface	xxiii
Part I: Phonetics and Phonology of Ju 'hoansi Gutturals	2
Chapter 1: Introduction	3
Chapter 2: The Phonetics of Ju 'hoansi Guttural Consonants and Vowels	10
2.0. Introduction	10
2.1. Root Shape Inventory	11
2.2. Tone Inventory	12
2.3. Consonant Inventory	14
2.3.1. The Obstruent Inventory	14
2.3.2. Some Phonetic Properties of Ju 'hoansi Click Consonants	22
2.3.2.1. <i>Click Modulation</i>	22
2.3.2.2. <i>Click Type Differences</i>	29

2.3.3.	Phonetic Properties of Guttural vs. Non-guttural Clicks	33
2.3.3.1.	<i>Closure Properties of Non-guttural Clicks</i>	34
2.3.3.2.	<i>Release Properties of Guttural Clicks</i>	40
2.3.4.	Phonetic Properties of Sonorant Consonants	58
2.4.	The Vowel Inventory	63
2.5.	Parallels between Guttural Consonants and Vowels	80
2.6.	Conclusion	97
Chapter 3:	Ju ’hoansi Phonotactics	99
3.0.	Introduction	99
3.1.	Recorded Database	100
3.2.	Word Minimality and Maximality	104
3.2.1.	Word Minimality	105
3.2.2.	Word Maximality	108
3.2.3.	Constraints on Word Size	111
3.2.4.	Conclusion	112
3.3.	Guttural Feature Specification	112
3.4.	Positional Specification	121
3.4.1.	Positional Specification of Manner Features	122
3.4.1.1.	<i>Frequency of Initial Clicks Based on Perceptual Salience</i>	128
3.4.2.	Positional Specification of Gutturals	134
3.4.3.	Conclusion	138

3.5.	Co-occurrence Restrictions	139
3.5.1.	Laryngeal Co-occurrence Restrictions	140
3.5.2.	Tone and Guttural Co-occurrence Restrictions	146
3.5.2.1.	<i>Description of Root Tonal Patterns</i>	147
3.5.2.2.	<i>Tone and Guttural V Co-occurrence Restrictions</i>	149
3.5.2.3.	<i>Tone and Guttural C Co-occurrence Restrictions</i>	151
3.5.3.	[pharyngeal] and Other Place Co-occurrence Restrictions	154
3.5.4.	[pharyngeal] and Vowel Height Co-occurrence Restrictions	161
3.6.	Functional Unity of Constraints	162
3.7.	Conclusion	167
Part II:	A Quantitative Acoustic Case Study: Auditory Grounding of the Guttural OCP	169
Chapter 4:	Methods for Acoustic Case Study	170
4.0.	Introduction	170
4.1.	Materials for Acoustic Case Study	170
4.2.	Data Collection and Preparation	173
4.2.1.	Labeling	174
4.2.2.	Pitch Period Determination	175
4.3.	Acoustic Measures of Periodicity	177
4.3.1.	Spectral Slope (H1-H2)	178
4.3.2.	Harmonics-to-Noise Ratio	181
4.3.3.	Jitter	186

Chapter 5:	Guttural Vowels and Guttural Coarticulation	189
5.0.	Introduction	189
5.1.	Harmonics-to-Noise Ratio	191
5.1.1.	Guttural Coarticulation	192
5.1.2.	Guttural Vowels	196
5.1.3.	Parallels between Guttural Consonants and Vowels	199
5.1.4.	Conclusion	205
5.2.	Spectral Slope	206
5.2.1.	Guttural Coarticulation	207
5.2.2.	Guttural Vowels	211
5.2.3.	Parallels between Guttural Consonants and Vowels	215
5.2.4.	Conclusion	221
5.3.	Jitter (PPQ)	222
5.4.	Conclusion	228
Chapter 6:	Conclusion	230
	Index	236
	References	247

List of Appendices

A. Wordlist for Quantitative Acoustic Case Study	232
B. Place Co-occurrence tables	234

List of Figures

1. Inventory of Ju ’hoansi prosodic root shapes	12
2. Fundamental frequency patterns associated with the four lexical tone levels	13
3. Waveforms of the roots containing initial click and non-click consonant types	25
4. Spectra at consonant bursts and vowel onsets	28
5. First formant frequency differences associated with the vowel /a/ following front and back clicks	31
6. Spectrograms of roots containing the four Ju ’hoansi types followed by a phonemically front vowel	32
7. Spectrograms of voiceless unaspirated and voiced unaspirated click initial roots	37
8. Spectra at $\frac{1}{4}$ point and $\frac{3}{4}$ point of the vowel in voiceless and voiced unaspirated click initial roots	38
9. F0 tracks associated with the voiceless and voiced unaspirated click initial roots	40
10. Spectrograms of the voiceless and voiced aspirated click initial roots	43
11. Spectra at $\frac{1}{4}$ and $\frac{3}{4}$ points of the vowel in the voiceless and voiced aspirated click initial roots	43
12. F0 tracks associated with the voiceless and voiced aspirated click initial roots	45
13. Spectrograms of the voiceless and voiced uvularized click initial roots	48
14. Spectra at the $\frac{1}{4}$ point and $\frac{3}{4}$ point of the vowel in voiceless and voiced uvularized click-initial roots	49
15. F0 tracks associated with voiceless and voiced uvularized click-initial roots	50
16. Spectrogram of glottalized click initial root	51

17. Spectrogram of voiceless epiglottalized click-initial root	52
18. Spectra at the $\frac{1}{4}$ point and $\frac{3}{4}$ point of the vowel in glottalized and epiglottalized click-initial roots	55
19. F0 tracks associated with glottalized and voiceless epiglottalized click-initial roots	55
20. Spectrogram and F0 track associated with the voiced epiglottalized click-initial root	57
21. Spectrograms of root-initial and root-medial [m]	59
22. Spectrograms of root-initial and root-medial [n]	60
23. Spectrograms of root-initial and root-medial /b/	61
24. Spectrograms of root-initial and root-medial /d/	62
25. Spectrograms of root-initial and root-medial /g/	63
26. Spectrograms of roots exemplifying the four guttural vowel types	66
27. Spectra at the $\frac{1}{4}$ point of vowel in the four guttural vowel types	69
28. F1 and F2 values associated with modal and epiglottalized low back vowels	70
29. Spectrograms of roots containing diphthongs in voice quality (Subject KK)	73
30. Spectrograms of roots containing diphthongs in voice quality (Subject NU)	73
31. Mean F9 patterns found on four guttural vowel types	78
32. F0 patterns on Super-Low toned roots containing modal and breathy vowels	79
33. Super-Low root tone patterns on roots containing modal and epiglottalized vowels	79
34. Spectrograms of roots exhibiting the four-way aspiration contrast (Subject KK)	84
35. Spectrograms of roots exhibiting the four-way aspiration contrast (Subject NU)	84
36. Spectra at $\frac{1}{4}$ point and $\frac{3}{4}$ point of vowels in roots displaying a four-way aspiration contrast	87
37. Spectrograms of roots exhibiting the four-way epiglottalization contrast (Subject KK)	90
38. Spectrograms of roots exhibiting the four-way epiglottalization contrast (Subject NU)	92

39. Spectra at $\frac{1}{4}$ point and $\frac{3}{4}$ point of vowels in roots displaying a four-way epiglottalization contrast	94
40. Mean F0 patterns found in roots containing partially and fully epiglottalized vowels	96
41. Histogram of the total rime duration of monotonal monophthongal vs. bitonal monophthongal monosyllabic roots and the final vowel of CVCV roots	107
42. Halle's (1995) Guttural Features	120
43. Plot of frequency of place features by root position	133
44. Labeled token of a single production of the root $g^{h}\text{àà}$ 'place for drying meat' produced by a male Subject KK	174
45. Sample epoch markers on epiglottalized vowel token in the root $!à^{\text{f}}\text{à}^{\text{f}}$ 'iron'	176
46. Waveform with window marked for computing spectrum	179
47. Spectrum at the midpoint of the vowel in the root $ \text{áá}$ 'to warm hands by fire'	179
48. Method of determining frequency bin for H1 and H2	180
49. Cepstrum computed over log magnitude spectrum at the midpoint of the vowel in a production of the root word $ \text{áá}$ 'to warm hands by fire'	183
50. Window surrounding estimated quefrequency of first rahmonic peak	185
51. Median gamnitude of the first rahmonic peak plotted against time in voiceless consonant initial roots in the [a] context	193
52. Median gamnitude of the first rahmonic peak plotted against time in voiced consonant initial roots in the [a] context	193
53. Median gamnitude of the first rahmonic peak plotted against time in voiceless and voiced consonant initial roots in the [a] context	195
54. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the $Ju ^{h}\text{hoansi}$ vocalic phonation type contrasts in the [a] context	197
55. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the $Ju ^{h}\text{hoansi}$ vocalic phonation type contrasts in the [o] context	198

56. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the Ju|’hoansi vocalic phonation type contrasts in the [a] context 199
57. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the Ju|’hoansi vocalic phonation type contrasts in the [a] context 200
58. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the Ju|’hoansi four-way aspiration contrast in the [a] context 202
59. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the Ju|’hoansi four-way epiglottalization contrast in the [a] context 203
60. Median gamnitude of the 1st rahmonic peak in the cepstrum plotted against time for the Ju|’hoansi two-way glottalization contrast in the [a] context 204
61. Median spectral slope values associated with voiceless consonant initial roots in the [a] context (Speaker DK) 207
62. Median spectral slope values associated with voiceless consonant initial roots in the [a] context 209
63. Median spectral slope values associated with voiced consonant initial roots in the [a] context 210
64. Median spectral slope values associated with vocalic phonation type contrasts on roots with voiceless consonant initials in the [a] context 212
65. Median spectral slope values associated with vocalic phonation types in the [a] context 213
66. Median spectral slope values associated with vocalic phonation types in the [o] context 214
67. Median spectral slope values associated with the four-way aspiration contrast 216
68. Median spectral slope values associated with the four-way aspiration contrast 217
69. Median spectral slope values associated with the four-way epiglottalization contrast 219
70. Median spectral slope values associated with the two-way glottalization contrast 220

71. Mean change in F0 against mean PPQ associated with vocalic phonation type contrasts over 1st half of the vowel 224
72. Mean change in F0 against mean PPQ over the first half of the vowel for guttural consonant contrasts 225
73. Mean change in F0 against mean PPQ over the first half of the vowel associated with vocalic phonation type contrasts 226
74. Mean change in F0 against PPQ over 1st half of vowel 227

List of Tables

I.	Tone levels and diacritics	12
II.	Inventory of Ju ’hoansi consonants that are unmarked for release type	17
III.	Inventory of Ju ’hoansi consonants with guttural release types	20
IV.	Scale of intensity of noisebursts for !Xóǒ consonants	23
V.	Ju ’hoansi vowel inventory	65
VI.	Mean third formant frequency values for modal and epiglottalized low vowels	71
VII.	Monophthongs vs. diphthongs in voice quality	71
VIII.	Data illustrating the four-way aspiration contrast	82
IX.	Data illustrating the four-way epiglottalization contrast	88
X.	Lexical frequency of prosodic root shapes	105
XI.	Guttural consonants and vowels	113
XII.	Featural specification of guttural consonants and vowels	117
XIII.	Full set of contrastive plosive types licensed in initial position	123
XIV.	Full set of guttural release properties on Ju ’hoansi initial plosives	124
XV.	Lexical frequencies of root initial consonant types in Ju ’hoansi	124
XVI.	Inventory of medial Ju ’hoansi consonants	125
XVII.	Frequency of medial consonants in Ju ’hoansi bisyllabic roots	125
XVIII.	LINEARITY, Align (Obstruent, L; PrWd, L) >> IDENT [-son]	127

XIX.	Lexical frequencies of root-initial obstruent types by manner	129
XX.	Percentage of consonants by manner of articulation in the Consonant inventory	129
XXI.	Co-occurrence of guttural vowels within the same syllable of CV ₁ V ₂ and CV ₁ V ₂ CV roots with non-guttural initial consonants	135
XXII.	Co-occurrence of guttural vowels in different syllables of CVCV and CVVCV roots with non-guttural initial consonants	137
XXIII.	Co-occurrence of guttural consonants and vowels	143
XXIV.	Co-occurrence of tones within roots	148
XXV.	Tone and guttural vowel co-occurrence patterns on CVV and CVVCV roots with non-guttural initial consonants	149
XXVI.	Tone and consonant phonation type co-occurrence patterns	153
XXVII.	Lexical frequency of Jul'hoansi diphthongs	155
XXVIII.	Co-occurrence of place features with guttural release properties	161
XXIX.	Lexical frequency of roots with different contour types	165
XXX.	Lexical frequency of C-V contour types	166
XXXI.	Co-occurrence of initial and medial place features on roots with unmarked release properties	234
XXXII.	Co-occurrence between initial place features on guttural-released initial consonants and medial place features	235

Acknowledgements

First and foremost, I would like to thank my adviser, Mary Beckman, who was a true mentor, always allowing me to formulate my own ideas about phonetics and about the phonetics—phonology interface, but always ready and eager to provide insights into how they might be grounded in the reality of acoustics and articulation. I would also like to thank Keith Johnson, who listened patiently as I formulated ideas, only softly pointing out where the holes in my ideas lay and allowing me to work them out in my own quiet way. He was also an excellent model for the way in which phoneticians attack problems, and I learned from his example. I also thank Beth Hume who was extremely encouraging and full of enthusiasm for my work. I value most the way in which she sees the creative capacity of phonological theories as equally important as the constraints on those theories. Many of the ideas in this dissertation were developed in Keith Johnson's seminar on *Phonological parsing*, Beth Hume's seminar on *Positional Specification*, as well as Beth and Keith's joint seminar on *The Role of Perception in Phonology*. It is the constant encouragement and excitement about linguistics as an empirical science which unites all three of my committee members, and for which I value all of them more than I can express in words. I would also like to thank David Odden, who helped me to achieve a strong background in phonology, and for his help with the initial set up of the database.

Chuck Kisseberth and Jennifer Cole also had a great impact on my view of phonology. Chuck's view that phonological
